Erratum to “Exploring the thresholds of vision for perception and action” [Motor Control, 16(1), 120-128].

The authors regret overlooking an error that was introduced in the proofs of this manuscript. Equation 1 on p. 124 was used to examine whether individual participants were able to identify the masked stimuli at above chance levels and thereby to determine their visual threshold. In the published manuscript, the multiplication symbol was erroneously omitted from the denominator of the equation. Equation 1 should read:

\[
Z = \frac{(c/24 - 0.25)}{\sqrt{(0.25 \times 0.75/24)}}
\]
